ARBIHOST

Airbnb Arbitrage Intelligence Dashboard

Version 1.0
GitHub brodyautomates/arbihost
API Rentcast (rentcast.io)

SETUP GUIDE

Get ARBIHOST Running in Under 10 Minutes

This guide walks you through every step — from getting your API key to running your first live scan. You only need one account and one key.

REQUIRED
1 API Key
Rentcast — free tier available

SETUP TIME
< 10 min
Clone → Key → Run

COST
$0/mo
50 req/mo on free tier

1 Prerequisites

✓ Required

- Node.js v18 or later
- npm (included with Node)
- Git
- A terminal / command line
- A web browser

Check your versions

```
node --version
npm --version
git --version
```

Don't have Node.js?
Download it at **nodejs.org** — choose the LTS version. Install it and restart your terminal before continuing.

2 Get Your Rentcast API Key

ARBIHOST uses the Rentcast API to pull live rental listings and market data. You need a free account to get started.

1. **Go to app.rentcast.io/app/api-keys**
   Sign up for a free Rentcast account. No credit card required.
2. **Create a new API key**
   Click "Create API Key" in the dashboard. Name it "ARBIHOST" or anything descriptive.
3. **Copy your key**
   Copy the key to a safe place — you'll add it to your `.env` file in the next section.

TIER	REQUESTS/MONTH	PRICE	USE CASE
Free	50	**$0/month**	Personal scanning, testing
Starter	1,000	**$29/month**	Daily market scans
Growth	10,000	$79/month	Professional use

3 Install ARBIHOST

1 Clone the repository

```
git clone https://github.com/brodyautomates/arbihost.git
cd arbihost
```

2 Install dependencies

```
npm install
```

This installs React, Recharts, Tailwind CSS, and all other dependencies. Takes about 30–60 seconds.

4 Configure Your API Key

1 Create your .env file from the template

```
cp .env.example .env
```

2 Open .env and add your Rentcast key

```
.env

# Rentcast API Key — get yours at app.rentcast.io/app/api-keys
RENTCAST_API_KEY=rc_live_your_key_here_abc123xyz
```

> ⚠ **Keep your .env file private**
>
> The `.env` file is already in `.gitignore` — it will never be committed to GitHub. Never share this file or commit it publicly.

5 Run the Dashboard

```
npm run dev
```

Open your browser and go to: `http://localhost:5173`

When the app loads, it will automatically test your API key. If valid, it will fetch real rental listings for ZIP 33101 (Miami). You should see live data populate the table within a few seconds.

✅ **What you'll see on first load**

The dashboard connects to Rentcast, fetches active long-term rental listings for the default ZIP, applies STR revenue projections, and populates the sortable table. The "LIVE — Rentcast API" badge in the header confirms your connection is active.

---

6 Using ARBIHOST

FEATURE	HOW TO USE
Scan a new market	Type a ZIP code in the header, click RUN NEW SCAN or press Enter
Sort the table	Click any column header to sort ascending/descending
Filter results	Use the filter bar above the table: min spread, min beds, outreach status, address search
Analyze a deal	Click any row or the "View Deal →" button to open the side panel
Adjust occupancy	Drag the slider in the deal panel — profit numbers update in real time
Copy outreach email	Click "📋 Copy Email" in the deal panel
Track outreach	Click "📨 Mark as Sent" to update the status badge in the table

7 STR Revenue Projection Methodology

All projected STR revenue figures are calculated using this formula:

```
# STR Revenue Projection Formula
Projected Monthly Revenue = LT Monthly Rent × Bedroom Multiplier × Seasonal Factor
```

BEDROOMS	MULTIPLIER	BASIS
1 Bedroom	**2.30×**	AirDNA Miami market data
2 Bedrooms	**2.10×**	AirDNA Miami market data
3 Bedrooms	**1.95×**	AirDNA Miami market data
4 Bedrooms	**1.82×**	AirDNA Miami market data

To adjust multipliers for a different market, edit `STR_MULTIPLIER_BY_BED` in `src/App.jsx`.

8 Troubleshooting

PROBLEM	SOLUTION
Setup screen appears on load	Your API key is missing or invalid. Check `.env` has the correct key and restart with `npm run dev`
Table is empty after scan	The ZIP code may have no active listings. Try a nearby ZIP (e.g. 33139, 33131, 33133 for Miami)

PROBLEM	SOLUTION
API Error message	Check your Rentcast dashboard for remaining requests. Free tier = 50/month
npm install fails	Ensure Node.js v18+ is installed: `node --version`
Port 5173 already in use	Run `npm run dev -- --port 5174` to use a different port
